

Jobs To Be Done (JTBD) – Silka App

Core user activity

The app supports people who need a discreet way to ask for help in unsafe situations without touching or obviously using their phone when in a dangerous situation.

Job statement

When I feel unsafe and cannot openly ask for help, I want to trigger Silka quietly, so I can alert trusted contacts without drawing attention from the abuser

Obstacles

- Opening an emergency app could be noticed.
- Stress makes it hard to navigate the phone.
- The user may not be able to touch the phone.
- Speaking directly about danger may escalate the situation.

Existing workarounds

- Pretending to make a normal phone call.
- Sending coded messages to friends.
- Sharing live location before meeting someone.

Functional goals

- Trigger help quickly
- Work without visible phone interaction
- Alert trusted contacts automatically

Emotional drivers

- Feel safer
- Reduce panic

Social considerations

- Avoid alerting the aggressor
- Maintain privacy

Assessment of the current design

Silka supports this job by allowing discreet triggers and automatic safety actions with minimal interaction.

Possible improvements

- Reliable voice trigger detection
- Fast automatic alerts
- Keep interaction as simple as possible
